

## Contra indications of laser therapy

- direct radiation of endocrine glands (e.g. thyroid gland)
- cancer (active neoplasm not irradiate directly)
- pregnancy (abdomen not irradiate directly)
- eyes: direct or indirect radiation (never directly look into the beam!)
- with taking photosensitizing drugs (overreaction possible)
- epilepsy (when using with visible laser beam with frequency: stroboscope effect)
- with very dark skin or skin with tattoos: high milliwatt-performances may lead to heating due to absorption (thermic effect). Reduce power to approximately 50 %.

**Implants: are not contra-indicated !**
